Where's all your memory going? If you're going to make the biggest impact on your memory usage, then you need to understand how your Mac is currently consuming memory.. 5) and OS X Mountain Lion (10 8) was a refinement of OS X Lion (10 7), rather than offering radical new features, macOS High Sierra (10.. This live-updating graph uses colours to communicate just how good, or bad your memory situation really is: • Green.

13) is a refinement of macOS Sierra (10 12), too So, if you're a bit unsure as to how much disk space you have, or are a bit worried about not having enough, don't worry — There are Mac utilities to help you with getting space back on your hard drive, like CleanMyMac 3.. With CleanMyMac 3, you can clean up gigabytes of disk space in preparation for OS X Mavericks.. In fact, reducing the amount of memory you're using, is always a good idea if you want a faster, more responsive MacBook (and who doesn't want a faster, more responsive MacBook?) In this article I'm going to show you how to check the current state of your Mac's memory, before sharing 5 tips for freeing up a tonne of memory.. • Compressed To make more memory available for other processes, OS X will sometimes compress data in RAM, or swap it to your hard drive.
